

List of Profitable Projects on Printing Inks Manufacturing Industry. Production of Inks with Formulation.

Description:

List of Profitable Projects on Printing Inks Manufacturing Industry. Production of Inks with Formulation.

Lithographic Inks, Gravure Inks, Flexographic Inks, Offset Inks and Specialty Printing Inks, Inkjet Inks, Toner Inks, Copier Inks, Marking Ink, Colour Ink, Water Proof Inks, Writing Inks, indelible ink, Election Inks

Printing inks, refer to a liquid or paste, are widely used to color surfaces such as newspaper, books and magazines, cardboard and ceramic tiles to produce an image, text or design. Printing Inks contain pigments or dyes that are mixed with oil, solvents or water that forms liquid or paste. It can be widely used in coloring surfaces such as newspaper, books and magazines, cardboard and ceramic tiles.

India is among the fast growing printing ink markets globally spurred by the rapid expansion of the domestic print markets. Backed by a strong demand from key end user segments such as package printing, newsprint, publishing and other commercial printing, the printing ink market in India has registered strong growth in the recent years. The printing ink industry is fragmented with over 400 manufacturers and a large number of players in the unorganised sector.

Global printing inks market growth is attributable to increasing adoption of printing inks made of vegetable oil-based solvents, as these oils eliminate the use of mineral oils in inks. One of the prime drivers for the global printing inks market is the rising demand from the packaging sector.

The global printing inks market is segmented into water-based, oil-based, and solvent-based printing inks. Of these, oil-based and solvent-based printing inks hold the dominant share in the global printing inks market at present due to their widespread use and compatibility with the current technological framework. However, the use of oil- and solvent-based printing inks has come under the scanner in many regions due to their adverse environmental impact, leading to a promising opportunity for the water-based inks segment. The water-based inks segment is thus likely to exhibit steady growth in the global printing inks market in the coming years, aided by growing research in making water-based inks suitable for diverse purposes.
