

# List of Profitable Business Ideas in Waste Management, Disposal and Recycling Industry.

## Description:

### List of Profitable Business Ideas in Waste Management, Disposal and Recycling Industry.

***Industrial Waste, Medical Waste, Municipal Solid Waste, Biomedical Waste, E-Waste (Electronic Waste), Plastic Waste, Agro Waste, Municipal Garbage, Paper, Metal, Iron, Glass, Rubber, Wood Waste and Residue Processing***

Waste recycling is the key focus area within the waste management services market in India. Increasing population, growing consumerism, and high use of electrical and electronic equipment are increasing waste volumes across different type of waste streams. India being the 7th largest country in terms of area and 2nd largest in terms of population constitute immense business opportunities for domestic and international solid waste management players. The country has seen some dramatic economic and social developments in the last decade.

India's waste management sector is expected to be worth US\$13.62 billion with an annual growth rate of 7.17 percent. Much of the waste India produces simply ends up in landfills without proper processing or treatment – redirecting this untapped waste to proper treatment and processing facilities will open up new investment possibilities.

Waste management is a global problem that continues to increase with rapid industrialization, population growth, and economic development. As the world hurtles towards the urban future, the amount of Municipal Solid Waste (MSW) is growing very fast. Waste includes any solid material or material that is suspended dissolved or transported in water or deposited on land. Wastes are generally classified into solid, liquid, & gaseous and are broadly classified as household waste; municipal waste; commercial and non-hazardous industrial wastes; e- waste, hazardous (toxic) industrial wastes; construction and demolition waste; health care wastes – waste generated in health care facilities (e.g. hospitals, medical research facilities); human and animal wastes; and incinerator wastes.

In the recent years, modern society has become more responsible when it comes to waste management. The fast industrialization, urbanization, modern technology, and rapidly growing population in India have posed a serious challenge to the waste management. In India, per capita generation rate of municipal solid waste ranges from 0.2 to 0.5 kg/day. At present, the daily generation rate in South Asia, East Asia and the Pacific combined is approximately 1.0 million tons per day.

The waste management market in India is expected to be worth US\$ 13.62 billion by 2025. Indian municipal solid waste (MSW) management market is expected to grow at a CAGR of 7.14% by 2025 while e-waste management market is expected to grow at a CAGR of 10.03% during the same period. India has planned to achieve a capacity of 2.9 million hospital beds by 2025 which will help bio medical waste management market to grow at a CAGR of 8.41%.
