

How to Manufacture Herbal Soaps & Detergents

Description:

Most of the commercial soaps and detergents contain chemicals that can be harmful to the skin. Using a natural herbal soap and detergents can be a good alternative. Herbal soaps and detergents are made using natural herbs and ingredients that are healthier and beneficial for the skin. Now a day people are very much aware of the ingredients in cosmetics products, the benefits of plant products and harmful effects of chemical ingredients. The Soap and Detergent industry is profoundly lucrative with splendid market potential as well as bright future scope. In order to meet the requirement of market demand, many more new units are recommended to be established on small and cottage scale.

The major contents of the book are: list and descriptions of the most important herbal products, technology of manufacturing herbal synthetic detergents, detergent bars, determination of physical, surface active and performance characteristics of surfactants, analysis of fats and fatty oils etc.
