

Excellent Investment Opportunities in Cold Storage, Cold Chain & Warehouse Projects

Description:

Fruits and vegetables have a very short shelf life after harvest. In order to prevent post-harvest losses, they have to be processed immediately or stored under refrigerated conditions.

Cold Storage and Cold Chain are essential for extending the shelf life, period of marketing, avoiding glut, post-harvest losses, reducing transport bottlenecks during peak period of production and maintenance of quality of produce. It is, therefore, necessary that cold storages are to be constructed in major producing as well as consuming centres. The development of cold storages in the country has an important role in reducing the wastages of the perishable commodities and providing remunerative prices to the growers and to make available farm products to the consumers at competitive and affordable prices.

The development of cold chain industry has an important role to play in reducing the wastages of the perishable commodities and thus providing remunerative prices to the growers. Also, it acts like a backbone for pharma industry and helps to maintain the efficacy of the drug throughout the supply chain by providing temperature controlled environment to sensitive pharma products.

Cold chain infrastructure includes cold storage infrastructure, transport infrastructure and point of production infrastructure. There are approximately 6300 cold storages in India designed originally for single commodity storage.
