

Cold Water Starch Production Business

Description:

Cold Water Starch Production Business. Manufacturing of Cold Water Starch for Laundry, Dry Cleaning, Textile Finishing, Paper Smoothing, Printing Finishing, Gluing and Gumming Industry

Cold water starch is a modified starch used to stiffen textile and other related fabric. Cold water starch is used to stiffen clothes and fabrics. It is used in cold water at room temperature on the fabric to be treated. Production of cold water starch is a lucrative business due to high demand for it. Cold water starch is easy to use; it does not require boiling water to prepare it, this has made it a darling to starch users and launderers. The raw materials for producing it are affordable and readily available in the market. Cold water starch is used during laundry and is applicable on a small or large scale.

It is simply used in cold (room temperature) water or directly on the material to be treated.

Types: There are two types, namely the powder and the liquid. However, the liquid is also found in aerosol pack.

Uses:

1. Laundry and dry cleaning
2. Textile finishing (cloth, bandages, rug towels) etc.
3. Fishing and other nets finishing
4. Paper smoothing (in paper production)
5. Printing finishing (Anti-set-off powder)
6. Gluing and gumming (labeling, binding & gumming)
