

Onion Powder - Market Survey cum Detailed Techno Economic Feasibility Project Report

Description:

The onion, also known as the bulb onion or common onion, is used as a vegetable and is the most widely cultivated species of the genus *Allium*. Onions are cultivated and used around the world. As a foodstuff they are usually served cooked, as a vegetable or part of a prepared savoury dish, but can also be eaten raw or used to make pickles or chutneys. They are pungent when chopped and contain certain chemical substances which irritate the eyes.

Onion is one of the major bulb crops grown in India which is presently attracting the attention of all persons due to the rise in prices. The price is directly related to the supply-demand of the commodity. An Indian farmer normally pays more attention to grow those crops which are fetched very good market prices during the last season. To get the very good prices during the present season, many farmers switch to grow the onion crop due to which the supply in the market increases many fold and the market glut fetches very low prices for farmers' commodity such as onions. To stabilize the prices of fruits and vegetables and reduce the post-harvest losses, drying of onion in the form of flakes and onion powder is adopted.
