

Chili Oil – Manufacturing Plant, Detailed Project Report, Profile, Business plan, Industry Trends, Market research, survey, Manufacturing Process, Machinery, Raw Materials, Feasibility study, Investment opportunities, Cost and Revenue

Description:

Spices are used for flavour, colour, aroma and preservation of food or beverages. Spices may be derived from many parts of the plant: bark, buds, flowers, fruits, leaves, rhizomes, roots, seeds, stigmas and styles or the entire plant tops. The term 'herb' is used as a subset of spice and refers to plants with aromatic leaves. Spices are often dried and used in a processed but complete state. Another option is to prepare extracts such as essential oils by distilling the raw spice material (wet or dry), or to use solvents to extract oleoresins and other standardized products. Spice oils are basically extracts from the spice seeds or spice plant parts and they are 100 percent pure extracts that retain the full body and flavor profile of the particular spice.

Chili is available throughout India. It is especially available in the U.P, Himachal Pradesh and other states. Chili is one of the abundantly domestically used as well as commercially used spices. Chili can be commercially exploited for extraction of chili oil and oleoresin afterwards it can be ground in Chili powders as used ground chili spices. For extraction of chili oil and oleoresin, there will be use of solvent extraction process or steam distillation process.
