PVC Membrane for Waterproofing - Manufacturing Plant, Detailed Project Report, Profile, Business plan, Industry Trends, Market research, survey, Manufacturing Process, Machinery, Raw Materials, Feasibility study, Investment opportunities, Cost and Revenue

Description:

The sheet ofpolyvinyl chloride is used as waterproof barrier in construction for all typesof roofs, terraces, walls also in civil engineering in vertical, tunnels orsmall hydraulic works and water tanks lining (metallic or concrete), ornamentallakes, ponds, pools, golf courses etc.

PVC sheets are manufacturedwith or without UV protection according to the intended application, if theapplication requires that the film is exposed to the sun apply UV resistant) ifinstead the sheet will be covered with another material so that is not exposedto sunlight

PVC membrane is acost-effective alternative to traditional roofing systems and can be producedin a multitude of colors to coordinate with individual building project needs.When produced in bright white, this flexible fabric membrane reduces radiantheat gain, keeping interior temperatures cooler during warmer weatherconditions.

PVC membrane is commonly coated with a protective acrylic or PVDFtop coat with a design life of approximately 15-20 years.
