

Production of Bioplastic Film using Biodegradable Resin

Description:

Production of Bioplastic Film using Biodegradable Resin, PLA (Polylactic Acid). Biodegradable Film Manufacturing Business - Sustainable Alternative to Plastics

Bioplastic is a biodegradable material that come from renewable sources and can be used to reduce the problem of plastic waste that is suffocating the planet and polluting the environment.

These are 100% degradable, equally resistant and versatile, already used in agriculture, textile industry, medicine and, over all, in the container and packaging market, and biopolymers are already becoming popular in cities throughout Europe and the United States for ecological reasons: they are known as PHA.

Advantages of Bioplastics:

- They reduce carbon footprint
- They providing energy savings in production
- They do not involve the consumption of non-renewable raw materials
- Their production reduces non-biodegradable waste that contaminates the environment
- They do not contain additives that are harmful to health, such as phthalates or Bisphenol A
- They do not change the flavor or scent of the food contained
