

# Tennis-Ball Factory. Cricket Tennis Ball Manufacturing Business

## Description:

A tennis ball consists of a pressurized rubber core covered with high-quality cloth, usually wool mixed with up to 35 percent nylon. Balls gradually go soft with use, and in tournament play they are changed at regular intervals agreed upon by officials and depending upon such factors as the court surface. Balls must have a uniform outer surface, and, if there are any seams, they must be stitchless. The ball must be yellow or white, between 2.5 and 2.8 inches (6.35 and 7.14 cm) in diameter, and between 1.975 and 2.095 ounces (56 and 59.4 grams) in weight. The ball must have a bounce between 53 and 58 inches (135 and 147 cm) when dropped 100 inches (254 cm) upon a concrete base.

Tennis ball can easily be used to play cricket. Tennis ball will work fine and swing on pitch but when it will hit on the ground by any batsman, the speed with which it will travel on grass will reduce it drastically.

The global tennis balls market was valued at USD 423.8 million in 2015. The global tennis balls market accounted for the second-highest share of the global tennis equipment market.

The world Tennis Balls market is highly competitive and concentrated due to the presence of large number of global and regional Tennis Balls vendors. The prime focus of all key players active into this market is to focus on developing their technological expertise. These factors are expected to boost the product portfolio and sustain in Tennis Balls industry for longer period of time. Vendors of the Tennis Balls market are also focusing on Tennis Balls product line extensions and product innovations to increase their Tennis Balls market share.
