

Ready Mixed Concrete. RMC Production

Description:

Ready Mixed Concrete. RMC Production. Ready-Mix Concrete (RMC) Manufacturing Plant. A Revolution in Production of Concrete

Ready-mix concrete (RMC) is a mixture of cement, water, sand and aggregates. Manufacturing ready-mix concrete and delivering through a transit mixer enables the implementation of precise concrete in the construction project, making it sturdy, strong and long lasting. Ready-mix concrete is particularly advantageous when small quantities of concrete or intermittent placing of concrete are required. Ready-mixed concrete is also ideal for large jobs where space is limited and there is little room for a mixing plant and aggregate stockpiles.

Ready mixed refers to concrete that is batched for delivery from a central plant instead of being mixed on the job site. Each batch of ready-mixed concrete is tailor-made according to the specifics of the contractor and is delivered to the contractor in a plastic condition, usually in the cylindrical trucks often known as "cement mixers."

Ready mix concrete is sometimes preferred over on-site concrete mixing because of the volume it can produce with precision of proportion of mixtures and also due to reduced work site confusion. Using a pre-determined concrete mixture reduces flexibility, both in the supply chain and in the actual components of the concrete.
