

# Soda Ash Manufacturing Industry

## Description:

### **Soda Ash Manufacturing Industry. Production of Sodium Carbonate / Soda Crystals/ Soda Ash / Washing Soda. Exploring Business Opportunity in Soda Ash Production**

Soda ash, also known as sodium carbonate ( $\text{Na}_2\text{CO}_3$ ), is an alkali chemical refined from the mineral trona or naturally occurring sodium carbonate-bearing brines (both referred to as natural soda ash), the mineral nahcolite (referred to as natural sodium bicarbonate, from which soda ash can be produced), or manufactured from one of several chemical processes (referred to as synthetic soda ash).

## **Applications of Soda Ash:**

Soda ash, also known as sodium carbonate, has the following uses:

- **Industrial Applications** – Being a highly soluble substance, soda ash is used for numerous chemical reactions. It's mostly used as an ingredient in the manufacture of dyes and coloring agents, synthetic detergents and fertilizers. It's also an important chemical agent used in enameling and petroleum industries.
- **Environmental Applications** – Sodium carbonate is used to improve and treat the alkalinity of lakes that have been affected by rain. It is also used to reduce the acidity of emissions being generated from a power plant.
- **Detergent Manufacture** – Soda ash is replacing phosphates that were earlier being used in a number of household detergents. Many other cleaning products such as dishwashing soaps also contain varying amounts of soda ash in their formulations.
- **Metallurgy** – Sodium carbonate is used to remove or de-clarify phosphates and sulfurs from a number of non-ferrous and ferrous ores. It's also used in recycling of aluminum and zinc.
- **Glass Manufacture** – Soda ash is an important ingredient in the manufacture of glass, since it helps reduce silica's melting point.
- **Other Applications** – Soda ash is also a common addition to spa and pool treatment chemicals helping in reducing the acidity in water. It is also used in manufacture and sealants and glues, preparing pulp in paper manufacture, and sometimes in soil preparation as well.
