

Paper Core Manufacturing Industry. Business Ideas in Paper Packaging Industry

Description:

Paper Core Manufacturing Industry. Business Ideas in Paper Packaging Industry

Paper cores are long tubes used for many applications that range from paper towel rolls to cable reels, and many things in between. They are also called paper tubes, spiral-wound paper cores, and fiberboard cores.

Paper cores are extensively used for shipping, storing, spinning industry and are used for closures of plastic, wooden, and metal.

Paper Cores are extensively used for:-

- Carpet yarn, coir mat, denim, and jute winding.
- Cores used in packing submersible pumps & a host of engineering goods.
- Cores with polished surface used in polyester film & audio tapes.
- Cores used in newsprint, paper & board industry
- Core used in self-adhesive tapes & flexible film winding.

Paper cores market is expected to grow due to increasing demand of the paper cores by various industry such as textile, paper mills, adhesive tapes, wire etc. during the forecast period. Paper cores are used for packaging of material as well as winding of products for storage and distribution. Depending on the intended use paper cores are made by different materials such as less durable cardboard or paper used for manufacturing paper cores for toilet paper, winding of films or paper towels, whereas heavy duty thick cardboard used for electrical, textile or fabric industry.
