

# TMT Steel Bar (Saria) Manufacturing Industry

## Description:

**TMT Steel Bar (Saria/Rod) Manufacturing Industry. Production of TMT Rebars (Reinforced Bars), TMT Rods. TMT Steel**

TMT bars or Thermo-Mechanically Treated bars are high-strength reinforcement bars having a tough outer core and a soft inner core. Thermo-Mechanically Treated bars or TMT bars are widely used for different construction projects. Made from high strength steel, TMT bars possess several qualities that make them the most preferred material for various construction projects.

With a unique metallurgical process that combines work hardening along with heat-treatment to create robust and high strength bars from low-carbon steel, TMT bars have a great demand.

## Advantages of using TMT Bars

•**Great Ductility and Bend Ability:** One of the distinct advantages of using TMT bars is that they have great ductility and bend ability properties. Because of this, one can create pre-welded meshes that are used to eliminate the need of manual binding. This brings down construction and fabrication time.

•**Malleability:** TMT bars are most preferred because of their flexible nature
