Flexographic Printing Industry

Description:

Flexographic Printing Industry. Flexography or Flexo Printing Business. Business Opportunities in Printing Sector

Flexography is a modern version of letterpress printing. This traditional method of printing can be used on almost any type of substrate, including corrugated cardboard, cellophane, plastic, label stock, fabric, and metallic film. The flexographic printing process uses quick-drying, semiliquid inks. In this age of digital printing, flexography holds its own in the areas of large orders and long print runs, particularly of packaging products and labeling.

Flexographic printing uses flexible photopolymer printing plates wrapped around rotating cylinders on a web press. The inked plates have a slightly raised image and rotate at high speeds to transfer the image to the substrate. Flexography inks can print on many types of absorbent and nonabsorbent materials. Flexography is well-suited to print continuous patterns, such as for gift wrap and wallpaper.

Flexographic printing is a popular method for printing large orders of custom labels at rapid speeds by transferring ink onto the paper or film material using flexible printing plates mounted on fast-rotating cylinders. Flexographic printing plates allow customization options that aren't possible with some other types of presses. A variety of products can be printed on flexographic presses like pressure-sensitive labels, shrink sleeve labels, flexible packets, multi-ply labels, double-sided printed labels, and more.
