#### Acetic Acid from Natural Gas

Acetic acid systematically named ethanoic acid is a colourless liquid organic compound with the chemical formula  $\text{CH}_3\text{COOH}$  (also written as  $\text{CH}_3\text{CO}_2\text{H}$  or  $\text{C}_2\text{H}_4\text{O}_2$ ). When undiluted, it is sometimes called glacial acetic acid. Vinegar is no less than 4% acetic acid by volume, making acetic acid the main component of vinegar apart from water. Acetic acid has a distinctive sour taste and pungent smell. In addition to household vinegar, it is mainly produced as a precursor to polyvinyl acetate and cellulose acetate. It is classified as a weak acid since it only partially dissociates in solution, but concentrated acetic acid is corrosive and can attack the skin.

Acetic acid is one of the simplest carboxylic acids. It is an important chemical reagent and industrial chemical that is used in the production of plastic soft drink bottles, photographic film; and polyvinyl acetate for wood glue, as well as many synthetic fibres and fabrics. Acetic acid, also known as ethanoic acid and methane carboxylic acid, is a colorless liquid that has a strong and distinct pungent and sour smell. Its chemical formula is  $\text{C}_2\text{H}_4\text{O}_2$ : it has two carbon (C) atoms, four hydrogen (H) atoms and two oxygen (O) atoms.

The global acetic acid market is expected progress at a CAGR of 4.30% during the forecast period, (2018-2023). The Asia-Pacific region is estimated to lead the market, due to its rapid growth in the global textile market.
