

Honey Processing Industry - Manufacturing Plant, Detailed Project Report, Profile, Business Plan, Industry Trends, Market Research, Survey, Manufacturing Process, Machinery, Raw Materials, Feasibility Study, Investment Opportunities, Cost and Revenue, Pla

Description:

Honey is a natural product produced by honeybees and consists of a very concentrated solution of a complex mixture of sugars, in which fructose and glucose are the main ingredients. It is the natural sweet substance produced by honey bees from the nectar of flowers. It is also produced from blossoms or secretions of living parts of plants or excretions of plant sucking insects, however, honeybees collect, transform and combine nectar with specific substances of their own, store and leave in the honey comb to ripen and mature. Bees produce blossom honeys from nectar and honeydew honey from honeydew. Honeydew is the product of small plant sucking insects.

Honey is used as a flavoring agent in honey cakes and gateaux. Its flavor which is distinctive varies with the type of vector. The different flavors are the result of characteristic aroma of flowers from which the nectars are gathered. It is the comb-honey that is stored by the bees in the cells of the wax honeycomb. Honey removed from the honeycomb is by centrifugal force and thus honey called extracted honey.
