

Diabetic Food Production (Diabetes Diet: Food that May Help Maintain Healthy Blood Sugar Levels) Manufacturing Plant, Detailed Project Report, Profile, Business Plan, Industry Trends, Market Research, Survey, Manufacturing Process, Machinery, Raw Material

Description:

Diabetic diet refers to the diet that is recommended for sufferers of diabetes mellitus. In 2010, an estimated 285 million people were living with diabetes. The number of people with diabetes in developing nations is expected to rise 69% by the year 2030 – outpacing even the ‘pessimistic scenario’ forecasts of earlier global disease models. The market opportunities for bulk, intermediate, and consumer diabetic foods are significant. The overall size of the diabetic packaged food market reached US\$ 282.9. Packaged foods that are labeled as "suitable for diabetics," low-glycemic (i.e. foods containing carbohydrates that do not cause a large rise in blood glucose), or low in sugar, are particularly good growth markets.
