

PET Strap Manufacturing Business

Description:

PET Strap Manufacturing Business. Production of Poly Ethylene Terephthalate Strap

PET Straps is known for its impact resistant and thus is widely used in different industries for packaging purposes. These PET Strap are anti-slit & do not break in between. Used with the right tools these Straps provide unmatched strength to replace steel strap.

PET strap is the commonly used thermoplastic polymer resin in the family of polyester strapping. It is primarily used for transportation of packaging materials, clothing, liquids & foods, building materials, and containers. PET strap is formed by the method, wherein a strap or polyester sheet is put through stretching steps with a specific stretch ratio.

Characteristics of PET strap include corrosion-resistance, high shock absorption ability, recyclability, high tensile strength, tear resistance, and elasticity. In terms of long term usage, this strap is highly vigorous and UV light resistant. PET strap is a less expensive alternative to steel strap as it has lower strength packaging requirements.
