The Complete Technology Book on Industrial Polymers, Additives, Colourants and Fillers

Code: NI180	Format: paperback
Indian Price: ₹1100	US Price: \$125
Pages: 512	ISBN: 8178330091
Publisher: Asia Pacific Business Press Inc.	

Description

The Indian plastic and polymer industry has taken great strides. In the last few decades, the industry has grown to the status of a leading sector in the country with a sizable base. The material is gaining notable importance in different spheres of activity and the per capita consumption is increasing at a fast pace. Numerous plastics and fibers are produced from synthetic polymers; containers from propylene, coating materials from PVC, packaging film from polyethylene, experimental apparatus from Teflon, stockings from nylon fiber, there are too many to mention them all. The reason why plastics are popular is that they may offer such advantages as transparency, self lubrication, light weight, flexibility, economy in fabricating and decorating. Properties of plastics can be modified through the use of fillers, reinforcing agents and chemical additives. Silicones are by far the most important industrial polymers and are based on silicon, an element abundantly available on our planet. Polymers are classified in three broad groups; addition polymers, condensation polymers and special polymers. It is well known that the major consumption of additives is in PVC compounds. Approximately 80% of additives are being used in PVC; however the left over 20% is consumed in compounding of other thermoplastics. Plastic master batches and fillers have their own importance in plastic processing industries. Colorants are the materials that give colour and opacity to plastics are chemically characterized as either pigments or dyes. Pigments are finely pulverized natural or synthetic particles which may be of inorganic or organic origin and insoluble in the matrix in which they are dispersed. Permanent red 2B is a mono azo pigment that is widely used in thermoplastics because it is inexpensive and has high tinting strength and good bleed resistance. Fillers are commonly employed in opaque PVC compounds to reduce cost

and to improve electrical insulation properties, to improve deformation resistance of cables, to increase the hardness of a flooring compound and to reduce tackiness of highly plasticized compounds. Various calcium carbonate are used for general purpose work, china clay is commonly employed for electrical insulation, and asbestos for flooring applications. Also employed occasionally are the silicas and silicates, talc, light magnesium carbonate and barites (barium sulfate). Polymer Energy system is an award winning, innovative, proprietary process to convert waste plastics into renewable energy. Polymers are the most rapidly growing sector of the materials industry. No wonder polymers are found in everything from compact discs to high tech aerospace applications. On the basis of value added, Indian share of plastic products industry is about 0.5% of national GDP.

Some of the astonishing fundamentals of the book are industrial polymers, addition polymers

polyolefins, polyethylene, chlorinated polyethylene, cross linked polyethylene, linear low density polyethylene (LLDPE), high molecular weight polyethylene, high density polyethylene, ultrahigh molecular weight polyethylene, polypropylene, poly(vinyl chloride), stabilizers, plasticizers, extenders, mineral filled or glass bead/milled glass grades, antistatic/electro conductive grades, electroplatable grades, etc.

The present book enlightens the processing of industrial polymers, additives, colourant and fillers. This book is an invaluable resource to new entrepreneurs, technocrats, researchers, professionals etc.

Content

1. INDUSTRIAL POLYMERS

INTRODUCTION

PART I: ADDITION POLYMERS

POLYOLEFINS

Polyethylene

Chlorinated Polyethylene

Cross-Linked Polyethylene

Linear Low-Density Polyethylene (LLDPE)

High-Molecular-Weight High-Density Polyethylene

Ultrahigh-Molecular-Weight Polyethylene

Polypropylene

Poly(Vinyl Chloride)

Stabilizers

Plasticizers

Extenders

Lubricants
Fillers
Pigments
Impact Modifiers and Processing Aids
Properties and Applications
Pastes
Poly(Vinylidene Chloride)
Polytetrafluoroethylene
Processing
Applications
Polyisobutylene
Polystyrene
Polybutadiene (Butadiene Rubber)
Polyisoprene
Polychloroprene
OLEFIN COPOLYMERS
Styrene-Butadiene Rubber
Nitrile Rubber
Ethylene-Propylene Elastomer
Butyl Rubber
Thermoplastic Elastomers
Styrene-Diene-Styrene Triblock Elastomers
Thermoplastic Polyester Elastomers
Thermoplastic Polyurethane Elastomers
Thermoplastic Polyolefin Elastomers
Ionic Elastomers
Fluoroelastomers
Styrene-Acrylonitrile Copolymer
Acrylonitrile-Butadiene-Styrene Terpolymer
Ethylene-Methacrylic Acid Copolymers (Ionomers)
Ionomers
ACRYLICS
Polyacrylonitrile
Polyacrylates
Polymethacrylates
Polyacrylamide
Poly(acrylic acid) and Poly(methacrylic acid)
Acrylic Adhesives
VINYL POLYMERS
Poly (Vinyl Acetate)

Poly(Vinyl Alcohol)
Poly(Vinyl Acetals)
Poly(Vinyl Cinnamate)
Poly(Vinyl Ethers)
Poly(Vinyl Pyrrolidone)
Poly(Vinyl Carbazole)

PART II: CONDENSATION POLYMERS

POLYESTERS

Poly(Ethylene Terephthalate)
Poly(Butylene Terephthalate)
Poly(Dihydroxymethylcyclohexyl Terephthalate)
Unsaturated Polyesters
Polyester-Glass-Fiber Laminates (GRP, FRP)
Polyester Molding Compositions

Aromatic Polyesters
Wholly Aromatic Copolyester

Polycarbonates

POLYAMIDES

Aliphatic Polyamides

Properties

Applications

Aromatic Polyamides

Polyimides

Modified Polyimides

FORMALDEHYDE RESINS

Phenol-Formaldehyde Resins

Resols

Novolac

Urea-Formaldehyde Resins

Molding Powder

Processing

Properties and Applications

Melamine-Formaldehyde Resins

POLYURETHANES

Polyesters

Polyethers

Polycaprolactone

Polyurethane Rubbers and Spandex Fibers

Cross-Linked Polyurethane Rubbers

(a) Prepolymer formation

- (b) Chain extension of prepolymer
- (c) Cross linking of chain-extended polyurethane

Thermoplastic Polyurethane Rubbers

Spandex Fibers

Flexible Polyurethane Foam

Applications

Rigid and Semirigid Polyurethane Foams

Polyisocyanurates

Polyurethane Coatings

ETHER POLYMERS

Polyacetal

Poly(Ethylene Oxide)

Applications

Polyethylene Glycol

Poly(ethylene Oxide)

Poly [Propylene Oxide]

Epoxy Resins

Resin Preparation

Curing

Other Epoxies

Applications

POLY(PHENYLENE OXIDE)

CELLULOSIC POLYMERS

REGENERATED CELLULOSE

Cellulose Nitrate

Cellulose Acetate

Other Cellulose Esters

Cellulose Ethers

PART III: SPECIAL POLYMERS

Heat-Resistant Polymers

POLY(PHENYLENE SULFIDE)

POLYSULFONE

Properties

Polyether Ether Ketone

Polybenzimidazole

SILICONES AND OTHER INORGANIC POLYMERS

Silicones

Silicone Fluids

Silicone Resins

Silicone Rubbers

Polyphosphazenes

Polythiazyl

FUNCTIONAL POLYMERS

Ion-Exchange Resins

Applications

Polymeric Reagents

Photoconductive Polymers

Electroconductive Polymers

Light-Sensitive Polymers

Piezoelectric Polymers

2. POLYETHYLENE, HIGH DENSITY (HDPE)

About NIIR Project Consultancy Services (NPCS)

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Pre-

feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of Plant and Machinery, Manufacturing Process and/or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry. NPCS also publishes various technology books, directories, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists, and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureaus, consultants and consultancy firms as one of the inputs in their research.
