The Complete Book on Construction Materials

Code: NI190	Format: paperback
Indian Price: ₹1475	US Price: \$150
Pages: 672	ISBN: 9788190439831
Publisher: NIIR PROJECT CONSULTANCY SERVICES	

Description

Construction industry is the largest consumer of material resources, of both the natural ones (like stone, sand, clay, lime) and the processed and synthetic ones. Each material which is used in the construction, in one form or the other is known as construction material (engineering material). No material, existing in the universe is useless; every material has its own field of application. Stone, bricks, timber, steel, lime, cement, metals etc. are some commonly used materials by civil engineers. Selection of building material, to be used in a particular construction, is done on the basis of strength, durability, appearance and permeability. The stone which is used in the construction works, in one form or another is always obtained from the rocks. The rocks may be classified in four ways; geological classification, physical classification, chemical classification and classification based on hardness of the stone. Various kind of rocks come under these classification for example; igneous rocks, plutonic rocks, sedimentary rocks, silicious rocks, stratified rocks etc. brick is the most commonly used building material which is light, easily available, uniform in shape and size and relatively cheaper except in hilly areas. Bricks are easily moulded from plastic clays, also known as brick clays or brick earth. Bricks can be moulded by any of the three methods; soft mud process, stiff mud process and semi dry process. There are various kinds of bricks; specially shaped bricks, burnt clay bricks, heavy duty bricks, sand lime bricks, sewer bricks, refractory bricks, acid resistant bricks etc. lime is an important building material, it has been used since ancient times. Lime is used as a binding material in mortar and concretes, for plastering, for manufacturing glass, for preparing lime sand bricks, soil stabilization etc. Concrete is a construction material obtained by mixing a binder (such as cement, lime, mud etc.), aggregate (sand and gravel or shingle or crushed aggregate), and water in certain proportions. Based on the binding materials, the common concretes can be classified as; mud concrete, lime concrete,

cement concrete and polymer concrete. World demand for cement and concrete additives is projected to increase 8.3 percent annually in next few years.

This book basically deals with rock and stone, formation of rocks, classification of rocks, geological classification, metamorphism physical classification of rocks, chemical classification, classification based upon hardness of the stone composition of stone (rock forming minerals), igneous rock forming minerals, sedimentary rock forming minerals, texture of the rocks, types of fractures of rock, uses of stone, natural bed of stone, aluminium and magnesium alloys, mechanical properties of a partially cured resin, DMA characterization, chemical advancement of a partially cured resin, differential scanning calorimeter characterization, chemical mechanical relations, moisture content as a variable, wettability and water repellency of wood, fungal and termite resistance of wood etc.

The book provide wide coverage of building materials such as stone, bricks, lime, mortars, concrete, asbestos, gray iron, cast iron, steel castings, aluminium, wood, architectural paints and so many others with their applications in building construction. The book is resourceful for all professionals related to construction field, technocrats, students and libraries.

Content

1. STONE

Introduction

Rock and Stone

Formation of Rocks

Classification of Rocks

Geological classification

Metamorphism

Physical classification of rocks

Chemical classification

Classification based upon hardness of the stone

Composition of Stone (Rock-forming Minerals)

Igneous rock forming minerals

Sedimentary Rock Forming Minerals

Texture of the Rocks

Types of Fractures of Rock

Uses of Stone

Natural bed of Stone

Seasoning of Stones

Characteristics or Qualities of Stones

Characteristics of principle Building Stones

Properties

Decay or Deterioration of Stones

Preservation of Stone

Artificial Stone

Important point to be Considered before Starting Quarrying

Methods of quarrying Stone

Various Operations of Blasting

Precautions in Blasting

Blasting materials

Making of Primer Cartridge

Storing of explosives

Handling of misfires

Dressing of Stone

Machines Required for Quarrying Stone

2. BRICKS AND OTHER CLAY PRODUCTS

Introduction

Brick Earth and its Constituents

Sources of Brick Earth

Qualities of Brick Earth

Chemical composition of Brick Earth

Functions of the constituents of Brick Earth

Harmful Ingredients

Pebbles of Stones and Gravel

Alkaline-Salts

Limestone and Kankar

Vegetation and Organic Matter

Manufacture of Clay Bricks

Selection of site

Preparation of Clay

Weathering Process

Tempering process

Moulding of bricks

Soft mud process

Procedure

Stiff Mud Process

Semi Dry Process

Drying of Bricks

Natural Drying
Artificial Drying
Burning of Bricks
Clamp
Intermittent Kilns
Continuous Kilns
Classification of Burnt Clay Bricks
Introduction
Properties of Burnt Clay Bricks
General Quality of Bricks
Dimensions and Tolerances
Water Absorption of Bricks
Efflorescence
Strength of Bricks
Testing of Bricks
Test for Compressive Strength
Test for Water Absorption
Test for efflorescence
Test for warpage
Special Bricks
Specially shaped Bricks
Burnt Clay Facing Bricks
Heavy Duty Bricks
Perforated building bricks
Sand lime Bricks
Sewer Bricks
Acid Resistant Bricks
Refractory Bricks
Manufacture
Acid bricks
Basic Bricks
Neutral Bricks
Building Tiles
Process for Manufacturing Roofing Tiles
Process for Manufacturing Flooring and Wall Tiles
Specifications for Building Tiles
Earthenwares
Glazed Earthenware Tiles
Terracotta
Stoneware

3. LIME

General

Properties of Lime

Uses of Lime

Source of Lime

Some Important Terms and their Definitions

Varieties of lime

Classification of Lime

Uses of fat lime

Classification of Lime According to I.S. 712-1984

Indian Standard Specification for Lime

Manufacturing process

Description of Each Stage of Operation

Field Control Test for Assessing Quality of Lime

Manufacture of Fat Lime

Advantages of continuous kiln

Manufacture of Natural Hydraulic Lime

Manufacture of Artificial Hydraulic Lime

Storage of Lime

Field Slaking of Lime and Preparation of Putty

Objective of Slaking

Slaking Process

Determining the Slaking Nature of Lime

Slaking Procedure for Quick Slaking Lime

Initial Preparation

Methods of Slaking Lime

General Precautions in Slaking

Slaking Procedure for Medium and Slow-slaking Limes

Running

Maturing

Making Coarse Stuff and Putty from Hydrated Lime or Powder

Coarse Stuff

Putty

Storage after slaking

Testing of Lime

Classification of binding materials

Precautions to be taken in handling lime

Properties of Lime

4. MORTARS

Definitions

Sand

Classification Based on Fineness

Bulking of Sand

Desirable Properties of Sand

Function of Sand in Mortars

Fineness Modulus of Sand

Tests for Sand

Selection of Sand for Use

Substitutes for Sand

Types of Mortars

Special Mortars

Properties of Good Mortar

Test for Mortars

Precautions in using Mortar

5. CONCRETE

Introduction

Lime Concrete

Preparation of lime Concrete

Laying of Lime Concrete

Properties of Lime Concrete

Use and Precautions

Water

Coarse Aggregate

Grading of Aggregate

Proportioning of Fine Aggregate to Coarse Aggregate

Maximum Size of the Aggregate

Measurement of Cement Concrete Ingredients

Significance of Bulking of Sand

Water Cement Ratio (W/C Ratio)

Proportioning of Concrete Mixes

Cube strength of Concrete

Properties of Cement Concrete

Slump Test

Factors Affecting Proportions of Concrete

Strength of Concrete

Mixing of Concrete

Transporting the Concrete

Placing of Concrete

Consolidation or Compaction of Concrete
Finishing
Curing of Concrete
Removal of Form Work
Joints in Concrete
Some other Types of Cement Concretes
Form Work

6. ASBESTOS

Introduction
Commercial Focus
Asbestos Sheets and Boards
Asbestos Cement Pipes

7. ASPHALT, BITUMEN AND TAR

Introduction
Terminology
Asphalt/Bitumen
Other Allied Terms
Bituminous Materials
Bitumen Felt/Tar Felt
Specifications and use
Other Bituminous Materials
Tests for Bitumen
Tar

8. GRAY IRON

The Metastable Iron-Iron Carbide System
Solidification of an Fe-C-Si Alloy
Chemical Composition Effects
Carbon
Silicon
Silicon Content and Graphitization
Sulfur and Manganese
Phosphorus
Gray-iron Specifications
Heat-treatment of Gray Iron
Machinability
Wear Resistance
Strength

Stress Relief

Alloying Elements

Effect on Microstructure

Chromium

Molybdenum, Molybdenum-Nickel

Nickel

Silicon

Copper

Aluminum and Titanium

Effect on Properties

9. CAST IRON

Definitions

Chemical Composition

Composition and Graphitization

Solidification Process

Microstructure

Graphite

Cementite

Ferrite

Pearlite

Steadite

Austenite

Properties of Cast Irons

White Irons

Chilled Iron

10. STEEL CASTINGS

Introduction

Molding Processes And Sands

Green-sand Molding

Refractoriness

High permeability and Low Moisture Content

Organic and Other Additions

Green-sand-molding Casing Defects

Dry-sand Molds and Skin-dried Molds

Other Types of Molds

Molding Methods

Cores

Hot-tear Formation

Metal penetration
Burn-on
Ceroxides
Core and Mold Washes

11. ALUMINIUM AND MAGNESIUM ALLOYS

ALuminum Alloying Principles
Copper
Heat-treatment of Cu-Al Alloys
Silicon
Magnesium
Magnesium and silicon

12. DUCTILE IRON

Solidification Of Ductile Iron
Development of Graphite Spheroids
Role of Magnesium
Control of the Common Elements
Carbon
Silicon
Sulfur
Phosphorus
Other Elements
Melting Practices
Acid Cupola Melting
Desulfurization
Basic Cupola Melting
Induction-furnace Melting
Magnesium Treatment
Inoculation
Engineering Properties

13. MALLEABLE IRON

Melting
Batch-Melting Process
Engineering Properties
Pearlitic Malleable Irons
Other Malleable Irons

14. RESIN CHARACTERIZATION

Introduction

Scope

Mechanical Properties of a Partially Cured Resin – DMA Characterization

Chemical Advancement of a Partially Cured Resin – Differential Scanning Calorimeter Characterization

Chemical-Mechanical Relations

Moisture Content as a Variable

Flake Bonding

Measurement of Pressing Environments

Resin Penetration

Practical Application

15. THERMO-GRAVIMETRY OF WOOD REACTED WITH FLAME RETARDANTS

Introduction

Experimental Methods

Results and Discussion

Phosphorus And Nitrogen

Thermogravimetry

Flame Test

Conclusions

16. WETTABILITY AND WATER REPELLENCY OF WOOD

Introduction

Experimental

Wood materials

Automated surface tension analyzer

Computer program: wood wettability study

Graph

Contact angle from attractive force

Contact angle from work of adhesion

Surface free energy estimation

Interaction parameter calculation

Aging effect

Results and Discussion

Aging effect

Surface free energy estimates

Interaction parameter calculation

17. FLAME RETARDANT TREATMENT OF WOOD

Introduction
Materials and Methods
Preparation of specimens
Treatment of specimens
Leaching
Dimensional stability tests
Thermogravimetric analysis
Results and Discussion
Treatment of specimens
Leach resistance
Dimensional stability
Thermal degradation
Conclusions

18. FUNGAL AND TERMITE RESISTANCE OF WOOD

Introduction
Materials and Methods
Fungal evaluations
Termite evaluations
Reaction time and chemical analysis
Results and Discussion
Decay Resistance
Chemical Analysis
Conclusions

19. WEATHERING OF WOOD

Introduction
Early History
The Weathering Process
Weathering Factors
Property Changes
Weathering of Wood-Based Materials
Protection Against Weathering
Film-forming Materials
Penetrating Finishes
Summary

20. ARCHITECTURAL PAINTS

Introduction
Exterior Paints for Wood

- Characteristics of Wood Siding
- Binders for Exterior House Paints
- Pigments for Colored Paints
- Microorganisms in Paints and Coatings
- Formulating Exterior Paints for Wood
- Interior Paints for Plaster and Wallboard
- Exterior Emulsion Paints for Masonry
- Exterior Solution Type Paints for Masonry
- Interior and Exterior Enamels
- Enamels for Wood and Concrete Floors

21. BUILDING CONSTRUCTION ADHESIVES

- Introduction
- Advantage of Using Adhesives in Construction
- Elastomeric Adhesives
- Gap-Filling Phenol Resorcinol Adhesives
- Polyurethane Adhesives
- Resorcinol Resin Adhesives
- Casein Adhesives
- Polyvinyl Acetate Resin Emulsion
- Phenolic Resin Adhesives
- Melamine-Urea Resin Adhesives
- Urea Resin Adhesives
- Epoxy Resin Adhesives
- Contact Cement

22. FLOORING

- Domestic Flooring
- Institutional Flooring
- Industrial Flooring
- Types Of Epoxy Flooring
- Self-levelling Floors
- Trowelled Floors
- Epoxy Terrazzo
- Future Developments In Epoxy Floors

23. MINING

- Adhesion And Grouting
- Remedial Uses
- Concrete Crack Repair

- Bonding Concrete to Concrete
- Bonding Reinforcements
- Epoxy Bonding in New Structures
- Fire Resistance
- Bulk Mechanical Properties
- Creep
- Miscellaneous Bonding Applications

24. GROUTS FOR LEVELLING: MISC. APPLICATIONS

- Miscellaneous Applications
- Soil consolidation
- Tile grouts
- Epoxy laminates for concrete moulds
- Resin concrete

25. GLASS

- Structure
- Composition
- Single-Phase Glasses
- Properties
- Manufacture and Processing
- Economic Aspects

26. CEMENT

- Clinker Chemistry
- Hydration
- Cement Paste Structure and Concrete Properties
- Manufacture
- Portland Cements
- Special Purpose and Blended Cements
- Nonportland Cements
- Economic Aspects, Production, and Shipment
- Specifications and Types
- Uses

27. INSULATING MATERIALS

- Introduction
- Thermal Insulation
- Terminology Related to Thermal Insulation

Requirements of Thermal Insulating Materials

Types of Insulating Materials

Air Spaces

Aerated Concrete

Gypsum

Expanded Blast Furnace Slag

Sprayed Asbestos

Vermiculite

Coconut Fibres

Cork Board

Rock Wool

Cellulose

Cellular Plastics

Fibre Glass

Sound Insulation

Terminology

Units of Sound

Velocity of Sound

Acoustics

Noise

Requirement of Sound Insulating Materials

Types of Acoustical Materials

Acoustic Pulp

Acoustical Plaster

Unifil Acoustical Plaster

Limpet Asbestos

Thermacoustic

Prefabricated Boards or Tiles

Glass Fibres

Composite Units

About NIIR Project Consultancy Services (NPCS)

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Pre-feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of

Plant and Machinery, Manufacturing Process and/or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry. NPCS also publishes various technology books, directories, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists, and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureaus, consultants and consultancy firms as one of the inputs in their research.
