The Complete Technology Book on Asbestos, Cement, Ceramics and Limestone

Code: NI297	Format: paperback
Indian Price: ₹1875	US Price: \$150
Pages: 592	ISBN: 9788178331669
Publisher: Asia Pacific Business Press Inc.	

Description

Asbestos is the generic term for a group of naturally occurring fibrous minerals with high tensile strength, flexibility, and resistance to thermal, chemical and electrical conditions. Asbestos fibers are of high-tensile strength, flexible, heat and chemical resistance, and good frictional properties. Cement is the most essential raw material in any kind of construction activity. Ceramics also known as fire clay is an inorganic, non-metallic solid article, which is produced by the art or technique of heat and subsequent cooling. Limestone is a sedimentary rock, mainly composed of calcium carbonate (CaCO₃). It is the principal source of crushed stone for construction, transportation, agriculture, and industrial uses.

Emerging applications in commercial sectors such as asbestos, cement and ceramic are poised to fuel demand in the coming years. Growing demand for limestone in the production of cement as well as in several other chemicals that are used in the production of high-value every-day products offers significant opportunities for growth. Global Limestone consumption is projected to reach 5.7 billion tons and expected to grow at an average annual rate of 4–5% in coming years. Presently, cement production is 330 million tonnes and expected to double to reach almost 550 million tonnes in future.

The major contents of the book are asbestos, monitoring and identification of air-borne asbestos, asbestos in industrial applications, asbestos – cement products, non – occupational asbestos emissions and exposures, cements, mortars and concrete, raw materials, additives and fuels for cement, processes of manufacturing of cement,

cement based on natural and artificial pozzolanas, fast-setting cements, special portland cements, packing of cement, storages of cement, ceramics, lime & limestone, glass & glass ceramics etc. It describes the manufacturing processes and photographs of plant & machinery with supplier's contact details.

It will be a standard reference book for professionals, entrepreneurs, those studying and researching in this important area and others interested in the field of these industries.

Content

Chapter I

Asbestos

Commercial Uses

Properties and Composition

Method of Analysis

Chrysotile

Procedure

Crocidolite and Amosite

Procedure

Chapter II

Monitoring and Identification of Air-borne Asbestos

Synopsis

Introduction

Membrane Filter Method

I. Outline Technique

II. Definitions of Fibre which are evaluated

III. Membrane Filter

IV. Sampling

V. Transportation of Filters

VI. Mounting of the Filters

VII. Microscopical Evolution

VIII. Accuracy of the Membrane Filter Method

IX. Recent Developments in Fibre Evaluation

Determination of Very Low Asbestos Concentrations

Direct - Reading Dust Monitoring Equipment

Miscellaneous Instruments

I. Introduction

II. The Thermal Precipitation

III. The Konimeter

IV. Owens Jet Counter

V. The Impinger

Identification of Air-borne Asbestos Fibres

I. Introduction

II. Optical Techniques

III. Electron Microscopical Techniques

IV. Physical and Chemical Analysis

Summary

Chapter III

Alternatives to Asbestos in Industrial Applications

I. Thermal Properties

II. Mechanical Properties

III. Other Properties

IV. Price and Availability

V. Applications

Industrial Applications of Asbestos Products

I. Asbestos Textiles

1. Fire and Heat Protection Clothes

2. Fire Blankets, Curtains and Aprons

3. Electrical Insulators

4. Filters

5. Ropes, Yarns, Tapes etc

6. Other Applications

II. Thermal Insulations and High Temperature Applications

1. Dry Asbestos Packings

2. Asbestos Jointings

3. Gaskets

4. Lining and Insulating Blocks

5. Ceramic and Mineral Fibres

6 Vermiculite and Perlite

7 Solid Ceramics

8 Further information

III. Asbestos millboard

1. Substitutes

IV. Industrial applications of asbestos-cement

1. Substitutes

VI. Friction materials

1. Substitutes for asbestos in friction materials

V. Dry-rubbing bearings

1 Substitutes for asbestos-reinforced thermosets
in bearing applications

2 Conclusion

3 Acknowledgments

VI Electrical insulation

1 Substitutes for asbestos products in
electrical insulation

2 Substitute electrical insulants at high temperatures

VII Asbestos composites (not including frictional,
bearing, and electrical applications)

1 Alternatives to asbestos composites

VIII Miscellaneous applications

1 Substitutes

Health hazards of substitute materials

Conclusions

Chapter IV

Asbestos-Cement Products

Methods of Manufacture

Methods of Analysis

Procedure

Procedure

Chapter V

Non-Occupational Asbestos Emissions and Exposures

Asbestos emissions from natural sources

Asbestos emissions from human-created sources

Redistribution and fate of asbestos in the environment

(i) Redistribution by air

(ii) Redistribution by water

(iii) Ultimate fate of asbestos fibres

Exposure to airborne asbestos

(i) Exposure from ambient air

(ii) Exposure from air near asbestos industrial facilities

1 Asbestos mining, milling, and product manufacture

2 Transportation of materials containing asbestos

3 Estimated atmospheric concentration and exposures

(iii) Exposure from asbestos manufactured products

1 Automotive friction materials

2 Spray asbestos

(iv) Exposures from disposal of asbestos products and wastes

(v) Exposures of asbestos workers' families

Exposure to asbestos in drinking water

(i) Asbestos content of drinking water supplies

(ii) Elevated asbestos levels

(iii) Estimated asbestos consumption from water

Exposure to asbestos in foods and drugs

Appendix, calculation of atmospheric asbestos concentrations in the vicinity of major U.S. Asbestos industrial facilities

Chapter VI

Cements, Mortars and Concrete

Hydraulic Cements

Cement Specifications

Methods of Analysis

Determination of Compound Composition

Determination of major components

Rapid Procedures for Major Components

Chapter VII

Raw Materials, Additives and Fuels for Cement

1. Raw Materials for Making Cement

2. Constituents of Raw Mix and their proportioning

2.1 Limestone

2.2 Silica and Alumina

2.3 Iron Oxide

3. Proportioning Constituents

3.1 Correcting Materials

4. Composition of Clinker

5. Quality Control

5.1 Commonly Found Proportions

6. Blended Cements

7. Fuels

8. Fuel in Shaft Kilns

9. Fuels for Rotary Kilns

10. Coals as Fuel

10.1 Preparation of Coal for Firing

10.2 Preparation of Oil for Firing

11. Costs of Fuels

12. Coals

12.1 Typical Compositions of Coal and Coke are

12.2 Typical Composition of Coal Ash is

12.3 Volatiles

13. Calorific Value of Fuels

14. Oils

15. Gas as Fuel

16. Specific Fuel Consumption Obtainable using Different Fuels

17. Requirements of Raw Materials and Fuel

Chapter VIII

Processes of Manufacturing of Cement

1. Process of Making Cement

2. Predominance of Wet Process

3. Marginal grade Limestone and Froth Flotation

3. Dry and Semi Dry Processes

3.1 Semi Dry Process

5. Dry Grinding and Blending

6. Semi Wet Process

7. Preheaters

7.1 Lepol Grate Preheater

7.2 Suspension Preheater

8. Clinker Coolers

8.1 Rotary and Planetary Coolers

8.2 Grate Coolers

9. Increase in Size of the Cement Plant - Large Kilns

10. Calciners

11. Technical Collaborations

12. Various Processes, Machinery and Size of Cement Plant

Chapter IX

Cements based on Natural and Artificial Pozzolanas

1 Fly Ash based Cements

1.1 Composition and properties of fly ashes

1.2 Lime-activated fly ash binder

1.3 Portland-fly ash cement and fly ash concrete

1.4 High-volume fly ash concrete

1.5 Alkali-activated fly binder

2. Cements made with fluidized bed ashes

3. Binders containing natural pozzolanas and related products

4. Microsilica-modified Portland cement
5. Rice Husk ash based cement

Chapter X

Fast-Setting Cements

1. Control of Portland Cement setting by the use of chemical admixtures
2. Fast-setting gypsum-free portland cement
3. Fast-setting cements containing the phases $C_{11}A_7$, CAF_2 or $C_{12}A_7$
4. Fast-setting cements containing the phase tetracalcium trialuminate sulfate.
5. Fast-setting blends of portland cement and calcium aluminate cement
6. Fast-setting magnesium phosphate cement
- 7 Fast-setting glass cement
- 8 Miscellaneous fast-setting cements

Chapter XI

Special Portland Cements

1. Constituents and Composition of Portland Cements
 - 1.1 Tricalcium silicate ($3CaO \cdot SiO_2$, abbreviation C3S)
 - 1.2 Dicalcium silicate ($2CaO \cdot SiO_2$, abbreviating C2S)
 - 1.3 Tricalcium Aluminate ($3CaO \cdot Al_2O_3$, abbreviation C3A)
 - 1.4 The ferrite phase [calcium aluminate ferrite, $2CaO(Al_2O_3, Fe_2O_3)$] abbreviation C2(A,F)]
 - 1.5 Calcium sulfate
 - 1.6 Free Calcium oxide (free lime, CaO)
 - 1.7 Free Manganese oxide (periclase, MgO)
 - 1.8 Alkali sulfates
 - 1.9 Composition of Portland clinker and Portland cement
2. The Hydration of Portland Cement
3. High-C3S Portland Cement
4. Portland Cement with Elevated C2S content
5. High-C3A Portland Cement
6. C3A Portland Cement
7. Low-Iron (White) Portland Cement
8. High-Iron Portland Cement
9. High-MgO Portland Cement
10. Low-Alkali Portland Cement

- 11. Mineralized Portland Cement
- 12. High Specific Surface Area Portland Cement
- 13. Low Specific Surface Area Portland Cement
- 13. Limestone-Modified Portland Cement
- 15. Portland Cement Modified with Chemical Agents
- 16. Gypsum-Free Portland Cements
 - 16.1 Low-porosity cement
- 17. Special Approaches in Portland Cement Manufacture
- 18. Special Approaches in Cement Processing

Chapter XII

Packing of Cement

- 1. Packing Cement for Despatches
- 2. Packing Machines
 - 2.1 Rotary Packing Machines
- 3. Paper and HDPE/Jute Bags

Chapter XIII

Storages of Cement

- 1. Storages
- 2. Daily requirements of Various Materials
- 3. Conventions in Storing various materials
- 4. Factors Governing Storages
- 5. Storages of Semi Finished and Finished products
 - 6.1 Quarry
 - 6.2 Crusher
 - 6.3 Stack Reclaimer
 - 6.4 Raw Mill and Blending
- Kiln feed
 - 6.5 Preheater – Calciner – Kiln and cooler
 - 6.6 Cement
- 7. Storage After Expansion
- 8. Storage of Coal
- 10. Space for storages

Chapter XIV

Ceramics

Clay Products, Whitewares, and Porcelains

Enamels and Glazes

Glass and Glass Ceramics

Refractories
Newer Ceramics
Methods of Analysis
Determination of the Chemical Composition
Sampling
Analysis
Emission Spectrometry
X-Ray Diffraction

Chapter XV
Lime and Limestone
Properties
Uses
Methods of Analysis
Sampling and Handling Precautions
Composition Analysis
Basicity Tests
Physical Tests

Chapter XVI
Glass and Glass Ceramics
Constitution of Glasses
Method of Analysis
Composition Analysis
Chemical Methods for Individual Constituents
Redox State Determinations
Chelometry
Flame Spectroscopy
Emission Spectroscopy
Spectrophotometry
X-Ray Diffraction
Microscopy
Electron Microprobe Analysis

About NIIR Project Consultancy Services (NPCS)

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Pre-feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project

Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of Plant and Machinery, Manufacturing Process and/or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry. NPCS also publishes various technology books, directories, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists, and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureaus, consultants and consultancy firms as one of the inputs in their research.
