Modern Technology of Plastic & Polymer Processing Industries

Code: NI83	Format: paperback
Indian Price: ₹750	US Price: \$100
Pages: 429	ISBN: 8178330776
Publisher: Asia Pacific Business Press Inc.	

Description

The Indian plastic and polymer industry has taken great strides. In the last few decades, the industry has grown to the status of a leading sector in the country with a sizable base. The material is gaining notable importance in different spheres of activity and the per capita consumption is increasing at a fast pace. Continuous advancements and developments in polymer technology, processing machineries, expertise and cost effective manufacturing is fast replacing the typical materials in different segments with plastics. Plastics play a very important role in our daily lives. Throughout the world the demand for plastic, particularly plastic packaging, continues to rapidly grow. Polymer processing industry deals with the manufacture and production of polymer and synthetic substances for example acrylic plastics: poly (methyl methacrylate), poly vinyl chloride (PVC), polyamides, polyesters, cellulose plastics etc. Plastic is incredibly versatile and can be made from different ingredients, moulded into any shape, and put to a huge range of uses across industry and the rest of society. Polymer Energy system is an award winning, innovative, proprietary process to convert waste plastics into renewable energy. Polymers are the most rapidly growing sector of the materials industry. No wonder polymers are found in everything from compact discs to high tech aerospace applications. On the basis of value added, Indian share of plastic products industry is about 0.5% of national GDP.

This book majorly deals with properties and applications of engineering, the strength of thermoplastic composites, and the application of thermoplastic structural composites, applications of differential scanning, calorimetry and polymer characterization, polymer degradation and stabilization, advances in photo degradation and stabilization of polyurethanes and so on. This book also consists of raw material suppliers for plastic and plastic products, manufacturers of plastic processing machinery, plastics processing machinery and equipment (foreign),

machinery and equipment for plastic converting, extruders and extrusion lines, injection moulding machines and so on.

This book offers, in standardized and readily accessible information on the synthesis, structure, properties and applications of the most important polymeric materials. It has been designed as a text giving a balanced coverage of the science and technology of polymers finding major applications plastics. This book is very useful for industrialists, consultants, research scholars and institutes.

Content

1. PROPERTIES AND APPLICATIONS OF ENGINEERING

THERMOPLASTICS

Polyethylene Terephthalate (PET)

Applications

Polybutylene Terephthalate (PBT)

Characteristics

Applications

Polyamides (PA)

Characteristics

Applications

Polyoxymethylenes (POM)

Characteristics

Applications

Polycarbonate (PC)

Characteristics

Applications

2. THE STRENGTH OF THERMOPLASTIC COMPOSITES

Compression strength

The Tensile Strengths of Uniaxial Laminates

The Tensile Strengths of Cross-ply Laminates

Shear Strengths

Technological Tests

3. TEMPERATURE SENSITIVITY

The Effect of Temperature on Stiffness

The Influence of Temperature on Strength

Toughness and Temperature

Fire Resistance

4. THE APPLICATIONS OF THERMOPLASTIC STRUCTURAL COMPOSITES

Medical uses

Satellites and Launch Vehicles

Aircraft Structures

Marine applications

Automotive Engineering

Industrial Machinery

5. THERMAL ANALYSIS OF POLYMERIC MATERIALS

Dielectric Analyzer

Thermogravimetric Analysis (TGA)

Thermograms

High Resolution Thermogravimetric Analysis

Applications

Relative Thermal Stability

Differential Scanning Calorimetry (DSC)

6. APPLICATIONS OF DIFFERENTIAL SCANNING

CALORIMETRY AND POLYMER CHARACTERIZATION

Specific Heat Capacity Measurement

Calculations

DSC Curing Kinetics

Principle of Operation

Applications

DSC Thermal Stability Kinetics

Applications

Degree of Crystallinity and Melting Point (T_m)

Statement of the Problem

7. KINETIC STUDIES WITH DIFFERENTIAL SCANNING

CALORIMETER

Borchardt and Daniels Method

The Technique Assumes

ASTM E698 Method

Isothermal Method

Dynamic Versus Isothermal Method

Autocatalyzed versus Nth Order Kinetics

Theory and Calculations

Isothermal Method

8. THERMOGRAVIMETRY

Quality control and materials characterisation in the ceramics industry

Use of TGA to distinguish flame-retarded polymers from standard polymers

Measurement of Smoke Density by TGA/Photometric Analysis

TGA decomposition Kinetics

Applications

9. MOLECULAR WEIGHT AND DIMENSION OF POLYMERS

Concept of Average Molecular Weight

Molecular Weight Distribution

Measurement of Molecular Weight Average

Summary

10. POLYMER DEGRADATION AND STABILISATION

Types of Degradation

Other Types of Degradation

Recent Progress in the Degradation of Polyisobutylene

Introduction

Photodegradation

Oxidative Degradation

Stabilization

Sensitization

Advances in Photodegradation and Stabilization of

Polyurethanes

Introduction

Mechanism of Photodegradation

Effect of Physical State on Photodegradation

Photostabilization of Polyurethanes

Conclusion

New Developments in the Degradation, Stabilization, and

Sensitization of Poly (Methyl Methacrylate)

Introduction

Weathering

Plasma Degradation

Mechanical Degradation

Ultrasonic Degradation

Electrochemical Degradation

Radiative Degradation

Thermal Degradation

Photodegradation

Oxidative Degradation

Stabilization

Sensitization

11. CONDENSATION POLYMERIZATION OR STEP-GROWTH POLYMERIZATION

Functionality Principal

Types of Polymerization

Basic Characteristics of Condensation or Step-Growth

Polymerization

Formation of a Polyester

Relationship between Average functionality, Extent of Reaction and Degree of Polymerization

Molecular Weight Control: Quantitative Effect of Stoichiometric Imbalance on Maximum Attainable Molecular Weight

Kinetics of Step-growth Polymerization

Principle of Equal Reactivity of Functional Groups

Rate of Step-growth Polymerization

Distribution of Molecular Weight in (Linear Bifunctional Polycondensation

Derivation of Distribution Functions

Weight Average Degree of Polymerization

Multichain Step-Growth Polymers (Polyfunctional Systems)

Branching

Cross-linking

Prediction of Gel-Point

Some Additional Considerations of Non-Stoichiometric Reactant Systems

Practical Consideration of Gel Points

Molecular Weight Distribution in Multifunctional Reactant Systems

Interfacial Polymerization

12. COPOLYMERIZATION AND TECHNIQUES OF POLYMERIZATION

Concept of Copolymerization

Binary Copolymerization of Vinyl Monomers by Free Radical Mechanism

Analysis of the System and the Reactions Involved

Kinetics of Chain Propagation in Binary Copolymerization and Copolymer Composition

Significance of Monomer Reactivity Ratios

Types of Copolymerization

Ideal Copolymerization

Alternating Copolymerization

Azeotropic Copolymerization

Average Copolymer Composition

Determination of Monomer Reactivity Ratios

Rate of Copolymerization

Structure and Reactivity of Monomers and Radicals

Structure and Reactivity of Monomers

Resonance Stabilization

Radical Reactivity and Steric Effects

Polar Effects and Alternation

Technical Significance of Copolymerization

Block and Graft Copolymers

Techniques of Polymerizations

Bulk Polymerization

Solution Polymerization

Suspension Polymerization

Emulsion Polymerization

13. POLYMER CHARACTERISTICS AND POLYMER CHARACTERIZATION

The Structure of Vinyl and Related Polymers

Prevalence of Head-to-Tail Structure in Vinyl Polymers

Branching in Vinyl Polymers

Polymer Degradation

Thermal Degradation

Depolymerization

Substituent Roles

Mechanochemical Degradation

Aging or Oxidative Degradation

Photodegradation

The Concept of Average Molecular Weight

Viscosity Average Molecular Weight

General Expression for Viscosity Average Molecular Weight

Number Average Molecular Weight

Membrane Osmometry

Weight Average Molecular Weight : Light Scattering by Polymer Solutions

Dissymmetry

End-Group Analysis

Dye Partition Technique

Dye Interaction Technique

The Z Average Molecular Weight

General Requirement of Extrapolation to infinite Dilution

Polymer Fractionation and Molecular Weight Distribution

Gel Permeation Chromatography

The Molecular Size Parameter

Molecular Weight Distribution in Vinyl Polymers

Thermal Analysis

Other Methods and Techniques of Polymer Characterization

14. PLASTICS: MATERIALS AND PROCESSING

TECHNOLOGY

Plastics Materials - Introduction

Polyethylene

Low Density Polyethylene (LDPE)

High Density Polyethylene (HDPE)

Structure and Properties of Polyethylenes

Uses and Applications of Polyethylenes

Chlorosulphonated Polyethylene

Linear Low Density Polyethylene (LLDPE)

Polypropylene

Synthesis of Polypropylene

Structure and Properties of Polypropylene

Copolymers of Ethylene

Polystyrene

Monomer Synthesis

Polymerization of Styrene

Structure and Properties of Polystyrene

Modification to High Impact Grades

Styrene-Acrylonitrile (SAN) Copolymers and ABS Resins

Processing, Uses and Applications of Polystyrene

Acrylic Plastics: Poly (Methyl Methacrylate)

Acrylic Fibres

Poly (Vinyl Acetate)

Polymers Derived from Poly(Vinyl Acetate)

Poly(Vinyl Chloride)

Preparation of Vinyl Chloride

Polymerization of Vinyl Chloride

Structure and Properties of PVC

Compounding and Processing of PVC

Applications of PVC

Copolymers of Vinyl Chloride

Polytetrafluoroethylene (PTFE)

Coumarone-Indene Resins

Polyacetals and Polyethers (Acetal Resins)

Polyamides

Preparation of Poly (Hexamethylene Adipamide): Nylon 66

Preparation of Nylon 6

Preparation of Nylon 11 and Nylon 12

Properties, Uses and Applications of the Nylon Polyamides

Liquid Crystalline Polymers³

Aromatic Polyamides
Polyimides
Polyesters
Alkyds for Oleoresinous Varnishes
Polyester Resins for Making Laminates and Composites
Film- and Fibre-Forming Polyester:
Poly (Ethylene Terephthalate)
Polyurethanes
Polycarbonates
Epoxy resins
Cellulose plastics
Cellulose Nitrate
Cellulose Acetate
Cellulose Ethers
Regenerated Cellulose
Phenolic Resins
Chemistry of Resin Formation
Commercial Production
Phenolic Moulding Powders
Phenolic Laminates
Cast Phenolics
Miscellaneous Applications of Phenolic Resins
Amino Resins
Urea-Formaldehyde Resins
Melamine-Formaldehyde Resins
Silicones
Additives for Plastics
Fillers
Plasticizers
Stabilizers
Colouring Matters
Lubricants and Flow Promoters
Cross-linking Agents
Other Additives
Plastics Processing Technology
Moulding Techniques
Forming Techniques
Other Techniques
Chart of Properties
15. DIRECTORY

Raw Material Suppliers for Plastic and Plastic Products
Manufacturers of Plastic Processing Machinery
Plastics Processing Machinery and Equipment (Foreign)
Machinery and Equipment for Plastic Converting
Extruders and Extrusion Lines
Injection Moulding Machines
Presses and Accessories
Blow-Moulding and Thermoforming Machines
Machinery for converting Reaction Resins
(Unsaturated Polyesters, Epoxies)
Coating Lines
Other Plastics Converting Machines
Miscellaneous Plastic Machineries

About NIIR Project Consultancy Services (NPCS)

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Pre-feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of Plant and Machinery, Manufacturing Process and/or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry. NPCS also publishes various technology books, directories, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists, and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureaus, consultants and consultancy firms as one of the inputs in their research.
