

The Complete Technology Book on Vermiculture and Vermicompost

Description:

The Complete Technology Book on Vermiculture and Vermicompost (Earthworm) *with Manufacturing Process, Machinery Equipment Details & Plant Layout* (2nd Revised Edition)

Vermicomposting and vermiculture are two terms that are used interchangeably, but they actually mean two different things. Vermicomposting is the practice of composting using redworms or another type of earthworm to accelerate the natural process of decomposition. Vermiculture, on the other hand, refers to raising redworms or other earthworms as food for pets or livestock; the worms themselves can be used to create fertilizer. The information in this guide will help you understand what vermiculture and vermicomposting are.
