Salt was the name originally given to the residue left by evaporation of sea water. Iodizing salt for human consumption is a modern trend. Iodine is used in the body formation of thyroxine an essential hormone. Salt is used as a medium in supply iodine to the body. Many important industrial chemical process are based on sodium chloride. At present there are 18 iodization plants, among the 4 plants are following dry mixing type process and 14 plants are using wet spray process. Bulk of the common salt produced in India goes for human consumption out of this only to some extent is iodized and that is not sufficient to meet the demand of iodized salt. A good market exist for this product.
