Sugarcane wax is difficult and economically intensive. Sugarcane is used almost exclusively to produce sugar. More importantly, there is just about 0.1 % of sugarcane wax in sugarcane. Therefore, economic productions can only be found in the major cultivation countries Brazil, India, China, Thailand, Pakistan and Mexico. During the production of sugar remains a filter residue, the so-called bagasse. The sugar cane wax is obtained from this filter residue. In that process, plant residues and chlorophyll are separated from the sugarcane.
