Fevicol type adhesives come under the category of synthetic resins and latex adhesives are made from polyvinyl acetate is a thermoplastic, odourless, tasteless, non-toxic, essentially clear and colourless resin. The excellent adhesion is due in part to the highly polar acetate groups in the polymer and partially to the unique combination of viscosity, tack, tensile strength and other properties that exist during application of the adhesive and during a formation and ageing of the bond. Adhesives are made in various types and may be synthetic or natural. The term synthetic adhesive means the adhesive which is prepared by using synthetic chemicals such as synthetic resin.

An adhesive is a material used for holding two surfaces together. An adhesive is prepared based on various types & techniques such as water based adhesives, solvent based adhesives, hot melt adhesives, pressure sensitive adhesives, and reactive adhesives. Adhesives play a very important role in various industries such as packaging, automotive, construction, footwear, medical industry, and many others for the bonding and assembly of various products. Adhesives Market is expected to reach USD 53,503.0 million by 2022, supported by a CAGR of 4.5% during the forecast period of 2017 to 2022. As a whole any entrepreneur can venture in this project without risk and earn profit.
