Ca-Zn stabilisers are used as metallic soaps such as stearates. Calcium-based stabilisers have also been introduced in PVC rigid calendaring film production.

CaZn stabilizers already hold a larger market share than lead. They provide excellent electrical properties, very good color, outstanding heat stability, good heat aging properties, and are in some cases superior to lead. Market share is expected to reach USD 7 billion by 2024. Which facilitates the development of new technologies and ensure a high quality product.
