Admixtures are materials added to the concrete before or during its mixing, with a view to modifying one or more of the properties of concrete in the plastic or hardened state. An important feature of the majority of admixture for concrete is that it is difficult to quantitatively evaluate the behavior of the concrete under various possible circumstances. They are widely used to improve the cohesion of poorly graded concrete. There is gradual increase of utilization of concrete admixture. There is requirement of utilization when works need. There is steady marked demand which is full filled by our internal market. There is a fair chance to certain increase of market demand. So, a new comer may approach to start the production with a quality conscious and competitive market.
