Hand pumps are the most economical means of providing water supply in rural and out laying urban area. The conventional hand pumps are being used in developing countries, are made from cast iron and have several draw backs, e.g. low discharge, inefficient operation requiring greater manual efforts, short life span and inability to work at depth beyond eight meters. In order to overcome these defects and to provide a more dependable community hand pump International agencies have developed mark II deep well hand pump. Its Indian version is called India Mark II pumps have the ability to pump water from wells as deep as 90 meters. The growth of pump industry has been remarkable. So there is good scope for new entrants.
