The development in pharmaceutical industry is very rapid and continuous research work throughout the world has resulted in a number of new medicines. Paracetamol which is also known as acetaminophen, has been developed to be used in place of phenacetin as phenacetin has been found harmful to kidney. It is used mainly as a pain relieving compound and relieves pain of headaches and other pains arising from muscles and joints etc. The other uses are paracetamol is an intermediate in the manufacture of other pharmaceuticals like the antimalarial anidequien. The production of drugs and pharmaceuticals continued to show an increasing trend. The present production covers a wide range of bulk drugs including antibiotics, vitamins, hormones, sulpha drugs and a host of other synthetic, physiochemical and biological products. A number of drugs have been put under the scheme of delicensing to facilitate their production in the country in required quantities. Few new entrepreneurs can venture into this project.
