Polishes usually contain several kind of natural and synthetic waxes, paraffin waxes, resins, solvents, auxiliary agents and water. As well as the requirements of the consumer, cost of the components is an important factor in the formulations. While shoes finishes are non commonly and loosely referred to as inks and stains many more chemical products are in general use in shoes factories as essential raw materials for finishing purposes. In big cities polishes are used for both shining the shoes and protecting them against dust etc. In all types of colours and design and the polishes are needed with every type of shoes. On an average about 10 crore shoes are sold every year and according to estimate ten tin or equivalent polish is consumed with every pair of shoe. A new entrepreneur can confidently venture into this field.
