Plaster of Paris or simply plaster, is a type of building material based on calcium sulphate hemihydrate. It is created by heating Gypsum to about 1500C. Plaster is used as a building material similar to mortar or cement. Like those materials plaster starts as a dry powder that is mixed with water to form a paste which liberates heat and then hardens. Plaster is also used for interior decoration. There is growing industrial activity in the field of white ware, such as pottery, sanitary ware, chemical and electrical porcelains, requiring large quantities of plaster of paris for making moulds. The demand for the product is ever increasing. It can be predicted that any entrepreneur may launch this product will be successful.
