Cashew (Botanical name Anacardium Occidentale) was introduced in India by the Portuguese four centuries ago mainly to prevent soil erosion. The cashew adapts to various types of soils and climatic conditions and is hardy and drought resistant tree. India is the largest producer, consumer and exporter of cashew nut. It ranks 2nd among horticultural commodities contributing 1.5 per cent of the total export earning of the country. Cashew cultivation in India confines mainly to the peninsular areas. It is grown in Kerala, Karnataka, Goa and Maharashtra along the West Coast, and Tamil Nadu, Andhra Pradesh, Orissa and West Bengal along the East Coast to a limited extent Madhya Pradesh, Manipur, Meghalaya and Tripura also share its cultivation and production. Indian cashew industry is characterized by a marked cultural dualism between small-scale growers and corporate sectors. Cashew is cultivated in India over an area of 0.77 million ha. At present India has a processing capacity over 1 million tonnes from 1098 processing units generating employment to over 0.5 million people in farms and factories.
